## Opening Remarks from the Chair of the Committee

The advancement of knowledge and technology in the field of medicine, especially in Hematology and Medical Oncology, continues to show remarkable progress. Innovations in diagnostic methods, genetic-based therapies, and advancements in immunotherapy and personalized medicine are bringing new hope for the treatment of hematologic and oncological diseases. Along with these rapid developments, a significant challenge emerges for clinical practitioners to continuously update their knowledge and skills in order to provide the highest quality of medical care.

The Indonesian Society of Hematology and Medical Oncology (PERHOMPEDIN) Bali Chapter is once again hosting the Bali Hematology and Oncology Update (BLOOD) 2025, aiming to serve as a platform for education and learning in addressing current clinical challenges. This seminar will focus on the application of the latest innovations in managing patients with hematologic and oncologic disorders, while also addressing the multidisciplinary challenges encountered in daily clinical practice.

With a timely and relevant theme, BLOOD 2025 is expected to offer valuable insights and enhance the practical experience of medical professionals, allowing them to stay abreast of the dynamic changes in the medical field. Additionally, this seminar seeks to strengthen collaboration between clinicians, researchers, and other stakeholders to improve the quality of care for hematology and oncology patients in Indonesia, particularly in Bali.
